

The National Danish Survey of Patient Experiences – a tool to measure improvement

Unit of Patient-Perceived Quality .

Marie Fuglsang, Mette Foged, Capital Region Denmark
/ Brian Rimdal

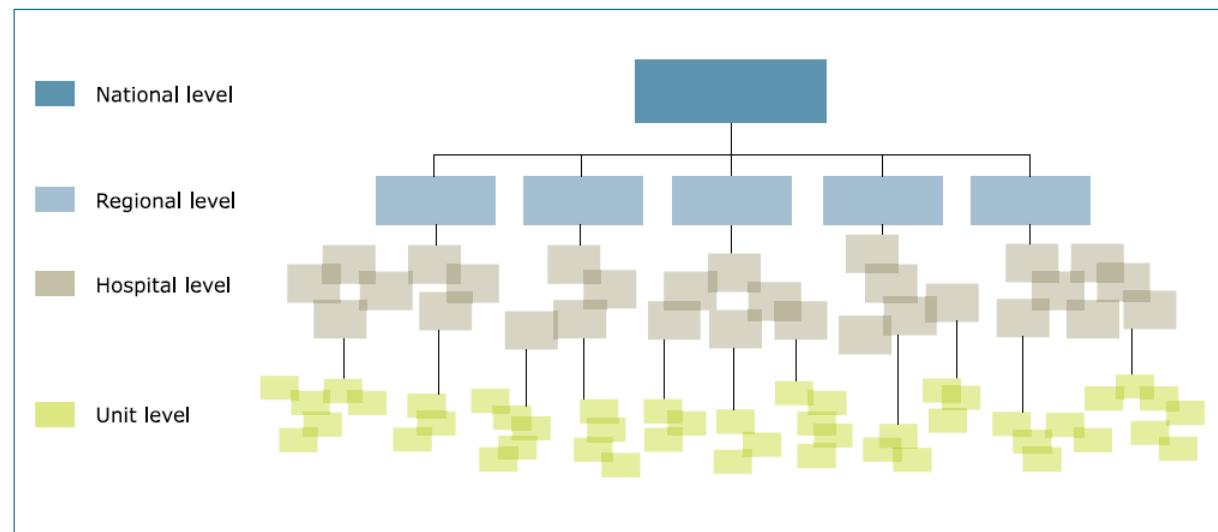

Main objective

The main objective of LUP is to provide an input for improving patients' experiences at unit, hospital, regional and national level.

- collecting data on patient experiences on specific topics
- benchmarking results among comparable units
- systematically monitoring the development over time

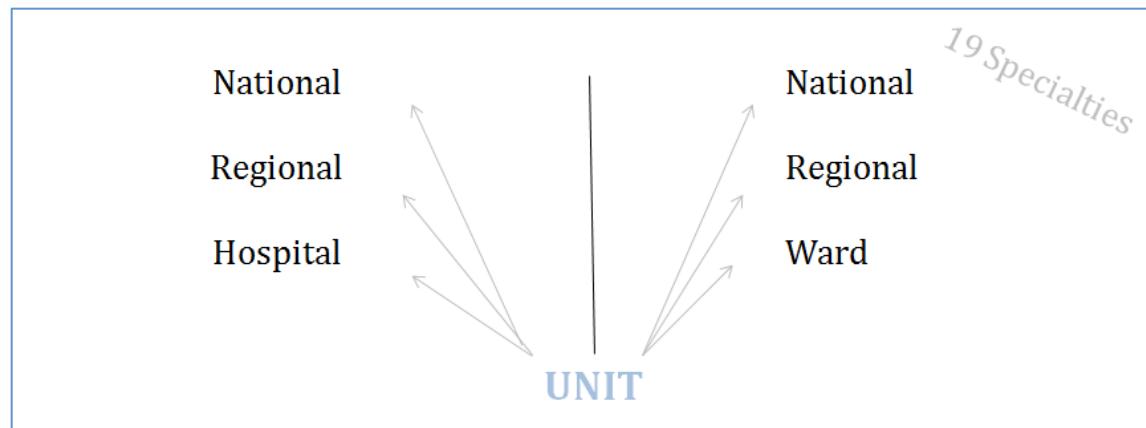

Survey principles and methods

Mix of national and regional questions there is an equal distribution with approximately 20 national and 20 regional questions.

Collaboration between LUP-questions and **The Danish Healthcare Quality Programme (DDKM)**

A **representative random sample** from National Patient Registry of Denmark

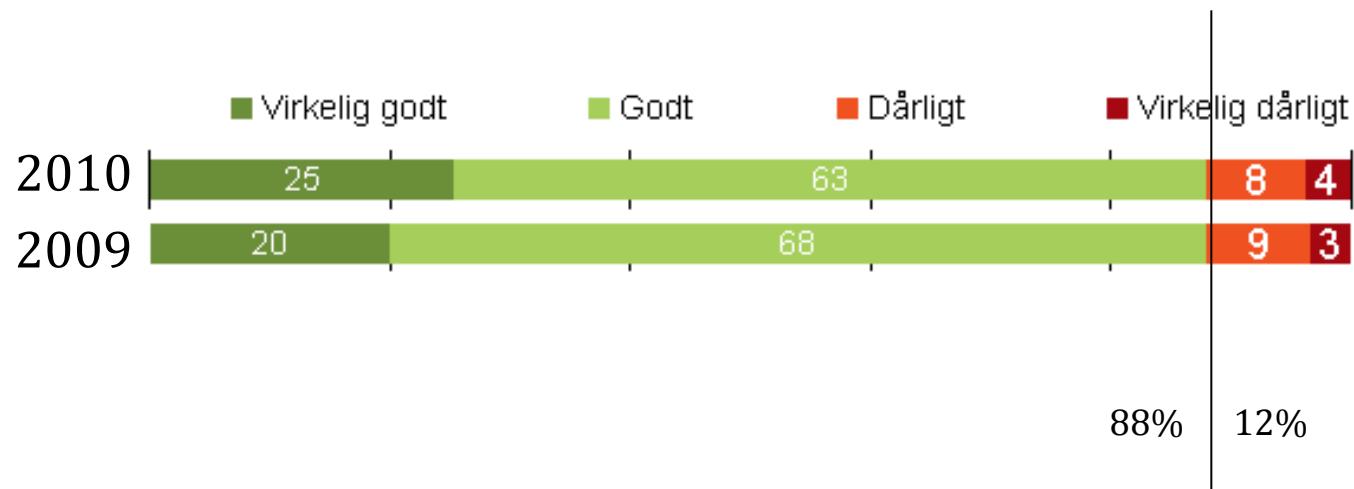

Survey principles and methods

Ordinal logistic regression compare two distributions – full scale

Benchmark (*over, under, average*)

Over time ()

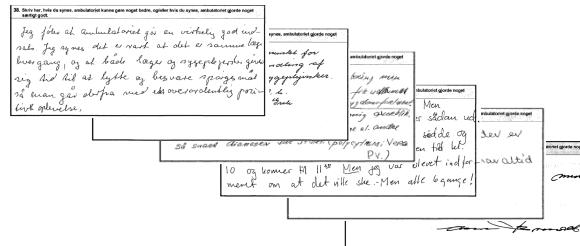

Every unit (level) gets:

- Figures and tables, that show the unit result compared with specialty result

- Patient text box answers

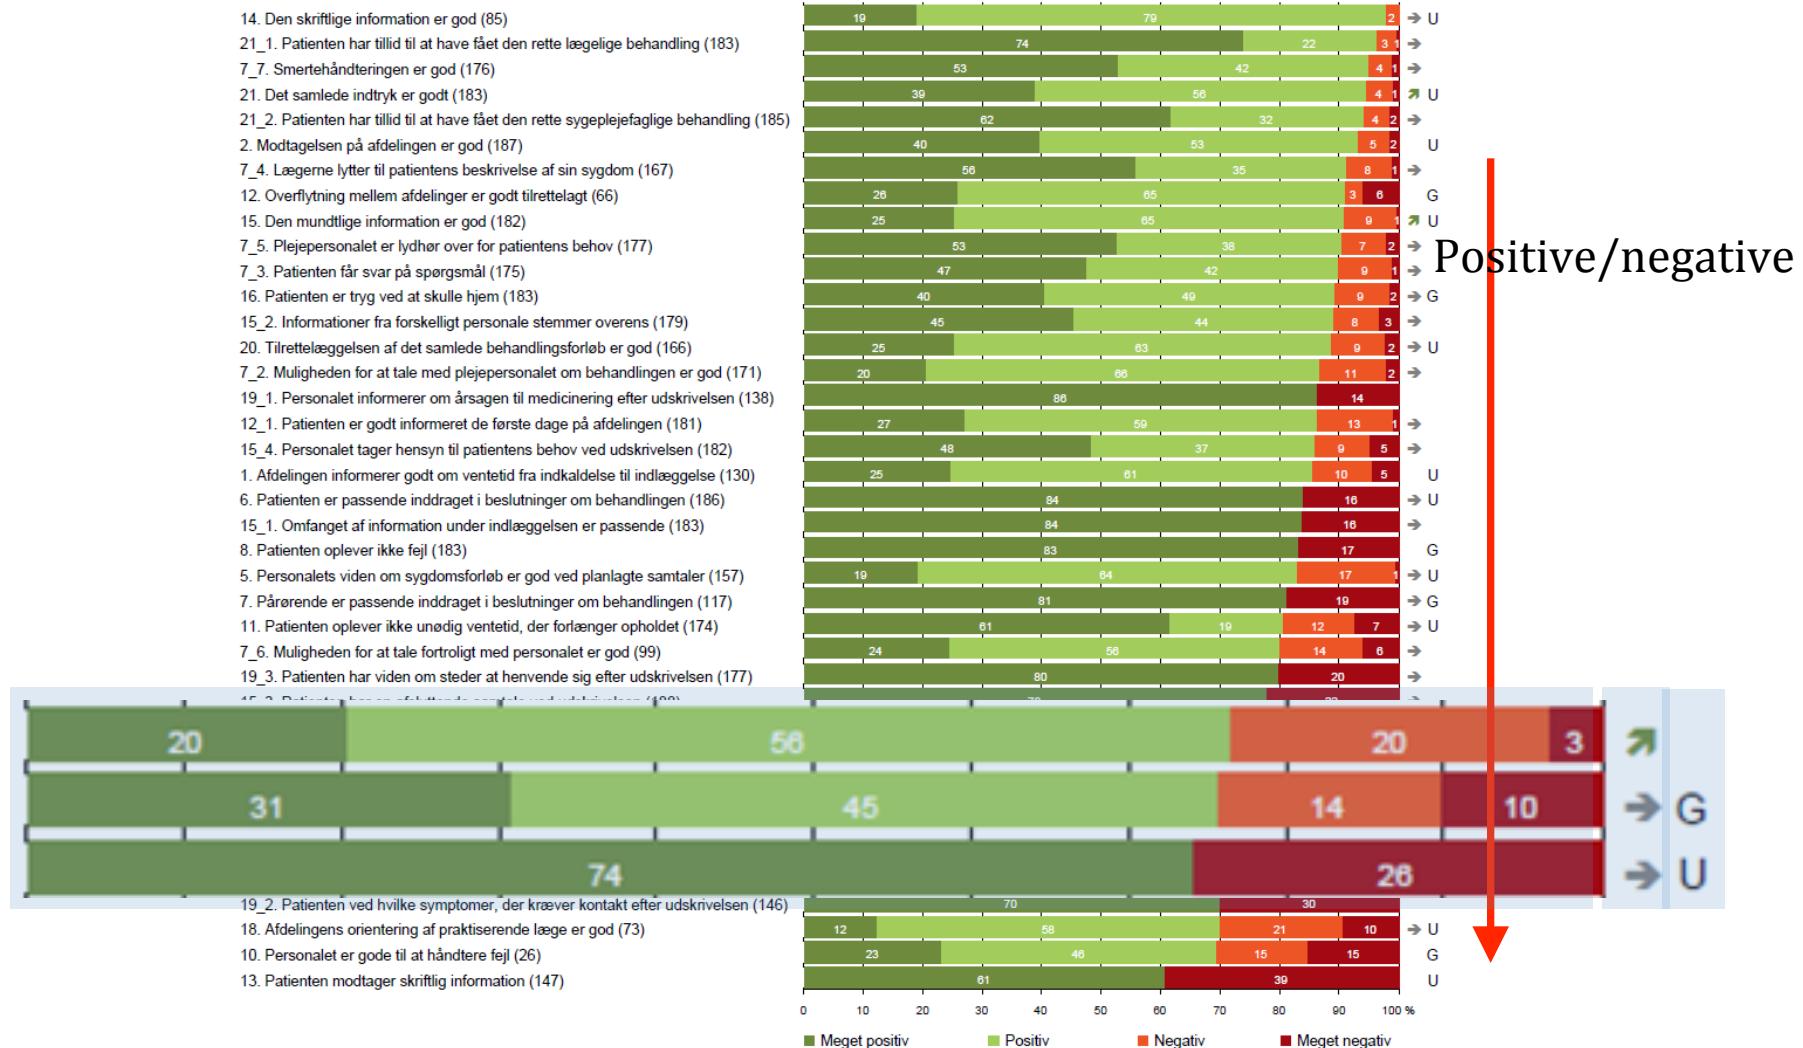

- Output is structured in relation to The Danish Healthcare Quality Programme

- Output customized

Open field answers

38. Skriv her, hvis du synes, ambulatoriet kunne gøre noget bedre, og/eller hvis du synes, ambulatoriet gjorde noget særligt godt.

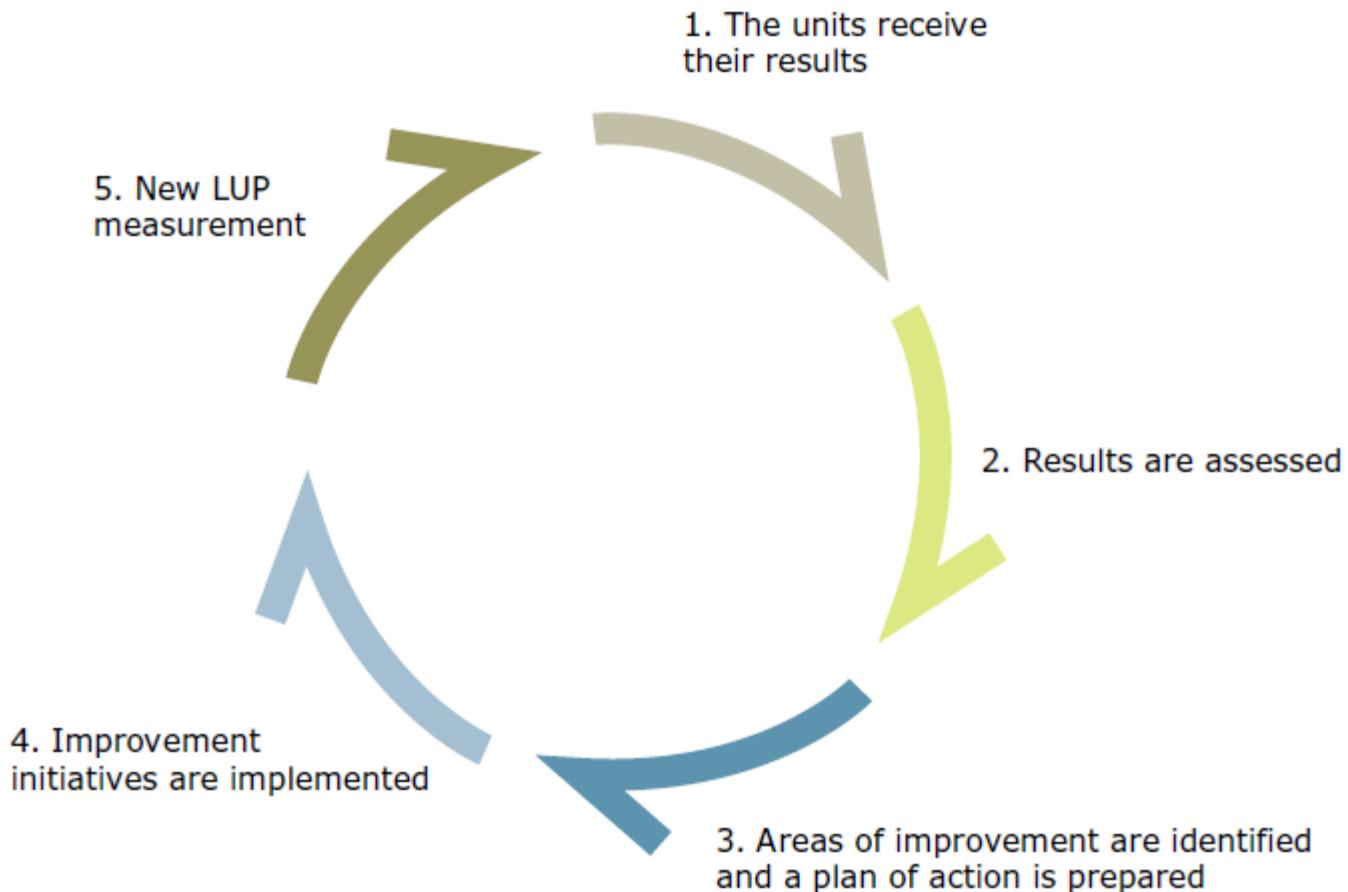

Det ville være fint om lægen præsenterede sig - så man visste hvem der behandlede mig.

"it would be nice if the Doctor presented herself - then You would know whos was treating you..."

- Increased response rate – from 54% to 61%
- More and more customized output
- 2010 is based on answers from 108,393 outpatients 36,757 inpatients
- 23 questions show a positive significant change
- **11** of 14 outpatients
- **12** of 13 inpatients
- Patient involvement 83% -> 87%
